TURBO FOG

**Cools your
open air events**

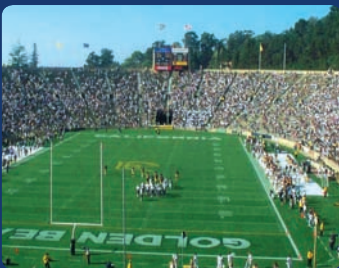

Turbo Fog is a powerful fan which can disperse air and water into fine droplets throughout the surrounding areas.

The fan is installed on a wheeled trolley, it can be swivelled both from side to side and up and down; in this way you can easily move it around to where you need to cool most and you can best orientate its air flow and fogging.

In order to use it is enough to connect it the 220V single-phase plug (only 1000Watt per hour) to the tank or to a drinkable water supply. The water consumption can vary from 10 to 200 l/h depending on the regulation.

28 metres

500 mq

WHERE TO USE IT:

Turbo Fog is perfect to reduce the temperature and make your stay more relaxing and enjoyable in those areas where there are animals and person; optimal for cooling areas such as parks, gardens and people hospitality tents, gazebos, beach umbrellas.

It is ideal to celebrate events in the open air such as: sporting events, parties, weddings, town events, baptisms, prizegivings and much more.
